

Directions for Entering URL's into the Mainframe

First you need to copy the original URL of the TGA.

This can be done either by copying from the forums or by copying from the address bar in the web browser of your choice.

1.

A. Copy from the Forums:
Control-Click on the compressed URL, then select "Copy Link"

B. Copy from the address bar:
Double-Click on the URL in the address bar, then press: Command-C

2.

Go to mainframe.macheist.com
at the bottom of the page there is a data input box.
Click on this box and paste your URL (Command-V)

3.

Click "Process" and the URL will be loaded onto the mainframe for processing.

4.

Repeat steps 1 through 3 for the other 8 URL's and then you are done. Your mainframe should now look something like this:

Congradulations! You have successfully finished this information gathering assignment. You should now have three apps in your loot: Process, Mac Dust and Pandora's Pests. See you all when the Heist actually starts!
